### PROVING GROUND

An essential part of the services in the field of Active Safety of DTC AG are tests and measurements in driving operation, which are carried out on our test track since 2013.

Site map

The 800 m long proving ground is divided into four sections:

- Driving dynamics surface 50 x 50 m (yellow area)
- Noise and braking zone 30 x 200 m (red area)
- Acceleration track 4 x 500 m (blue area)
- Sliding surface with low adhesion 4 x 200 m , automatic watering (grey area)

### YOUR BENEFITS

#### High availability

Our own proving ground allows the best possible availability. This gives us more flexibility to meet your deadline requirements.

#### Optimized ISO-Surface

The surface in the noise measurement area meets the latest requirements according to DIN ISO 10844:2016. This allows the measurements to be carried out under ideal conditions.

#### Minimized order duration

Due to the proximity to the premises of DTC AG, the processes can be simplified and the order duration can be minimized considerably.

## DRIVERS ORIENTATION AND SAFETY TRAINING

To take your vehicle control to a new level, experienced instructors will help you to approach the limits in a controlled manner. Experience your driving dynamics potential and the limits of your vehicle in the safety driving courses on our proving ground.

Driving

## VEHICLE DYNAMICS

In the „Driving Dynamics“ area, you will experience acceleration, braking and rapid cornering, while in the „Safety“ area you will experience the interaction of your driver assistance systems. On our extra-long sliding surface you will perform driving maneuvers even with low grip in order to keep control of your vehicle in slippery moments.
